[Test with RunKit]   [Report a vulnerability]

yarn-install `npm` `v1.0.0` `downloads` `163k/month` `build` `passing`

If command `yarn` exists it uses Yarn to install, otherwise fallbacks to npm.

Install

```
$ npm install --save yarn-install
```

Usage

```js
const install = require('yarn-install')

const result = install({
  deps: ['webpack', 'mocha']
})
//=> result, returned by child_process.spawnSync
```

CLI

```
yarn global add yarn-install

# then you will have `yarn-install` & `yarn-remove` commands
yarn-install pokemon --dev
yarn-install yo --global
yarn-remove xo
# don't forget that `yarn-install` with dependencies is always `--save` by default.

yarn-install help
yarn-remove help
```

API

install([options])

options

deps

Type: `array`

An array of dependencies to install, you can omit it to install dependencies in `package.json`. If `dependencies` is present, it defaults to `--save` mode.

```
install({
    deps: ['ava', 'koa']
})
```

cwd

Type: `string`

The directory to run the command.

registry

Type: `string`

Specfic a custom npm registry to use.

dev

Type: `boolean`

Use `--dev` for Yarn and `--save-dev` for npm.

global

Type: `boolean`

Install globally, stands for `npm --global` or `yarn global`.

remove

Type: `boolean`
Default: `undefined`

The reversed behavior to `install`, ie. `yarn remove` and `npm uninstall`

production

Type: `boolean`
Default: `undefined`

Only install `dependencies in package.json`.

respectNpm5

Type: `boolean`
Default: `undefined`

Use npm if it's >= npm5.

install.getPm([options])

Get the package manager that will be used to install.

options

respectNpm5

```
// Given you have yarn & npm 4 installed
const pm = install.getPm()
//=> yarn

// Given you have yarn & npm 5 installed
const pm = install.getPm()
//=> yarn

// Given you have yarn & npm 5 installed
const pm = install.getPm({ respectNpm5: true })
//=> npm
```

Contributing

1. Fork it!
2. Create your feature branch: `git checkout -b my-new-feature`
3. Commit your changes: `git commit -am 'Add some feature'`
4. Push to the branch: `git push origin my-new-feature`
5. Submit a pull request :D
